

This script writes a diminished progression layout out to a MIDI file.

Just copy me to a .lhs file and run me in ghci.

Check out the Haskell wiki: https://wiki.haskell.org/Literate_programming

```
import Euterpea
```

Here is an example of an ascending scale embedded directly in our text:

Here is the underlying musical phrase logic.

```
music = c 4 qn :=: e 4 qn :=: d 4 qn :=: f 4 qn :=:
      e 4 qn :=: g 4 qn :=: f 4 qn :=: gs 4 qn :=:
      g 4 qn :=: a 4 qn :=: af 4 qn :=: b 4 qn :=:
      a 4 qn :=: c 5 qn :=: b 4 qn :=: d 5 qn :=:
      c 5 qn :=: e 5 qn
```

Inject the 8/4 time signature metadata wrapper into the rendering compilation thread.

```
main = writeMidi "c6dim.midi"
      $ Modify (Custom "TimeSignature: 8/4") music
```
